

Individual Assignment Report PHP

17001552 - K.K.A.Sandaruwan

Introduction

This is a 'php' based assignment given under the course Rapid Application Development (RAD), which is directly connected to the group assignment of RAD. Which includes 5 members to each group. As the given guidance our team has divided the tasks among the group members. So as a member of group 06, the task allocated to me was "**Shopping cart**".

Methods

According to the given guidelines, I thought of doing it using "html" and "php".

Implementation

Database

Index page of the website has a form and when it is filled, those data is transferred to the database called "kk" where the table is the table name is "shopping_cart".

Viewing Customer Details [Retrieve function]

It is necessary to view data in the database. For that is used "view.php" file which shows data as a table

Updating Customer Details [Update function]

In the above mentioned table a button is given to update the data.

Delete Customer Details [Delete function]

As sometimes we want to delete data, a delete function also is added in the early mentioned table.

Assumptions

- ❖ System Administration has full privilege to remove a customer from the database.
